

SYSTEM AND METHOD OF COLLECTING, PROCESSING, AND DISPLAYING STOCK CERTIFICATE DATA OVER A COMPUTER NETWORK

ABSTRACT

5 A communications network based system and method for receiving
and parsing data related to a stock certificate, creating a stock certificate holdings
record from this data, and displaying this record to the holder. The system and
method comprises receiving data related to a stock certificate. Once the data is
received, it is parsed to identify the constituent elements of the data. After the
10 constituent elements of the data are parsed, a stock certificate holdings record is
created a holder identified in the data. Having the data sooner enables the holder
to initiate the process of delegerding and/or selling the stock certificate identified in
the data.
